

Career Planning

Prof. Ricardo Britto

Doctoral degree in Administration by
FEA/USP Director of IBS Americas

University of
La Verne

Global Executive Career

Develop leadership capacity in complex, competitive, and multicultural environments.

Generate long-term results, creating value for clients, employees, and investors.

Pillar 1

Understand the current executive scenario

Technology, risks, sectoral dynamics, and geopolitical changes shape what is “good management”

Pillar 2

Strategic capability

The market rewards those who combine technical repertoire, digital fluency, data literacy, and behavioral maturity.

Leadership is a built competence — and requires deliberate training.

Pillar 3

Personal strategy

Career does not evolve by inertia:
it advances with clear choices
about positioning, experiences,
networking, and transition
movements to environments
with greater scale and
complexity.

Pillar 4

Execution and maintenance
Reaching the top matters;
staying and prospering
requires consistency, personal
governance, health,
productivity, and continuous
adaptability.

Build a path for yourself

Each career is unique, but patterns of success repeat. Throughout the lecture, the proposal is to offer a decision map: what to observe, what to develop, and how to act to increase your chances in selection processes and promotions.

Accelerating to the Top: Your Global Executive Career Plan

A well-paid leader is not “just” experienced: it is someone who interprets trends, translates scenarios into strategy, and organizes people and resources to deliver sustainable growth.

Pillar 1: UnderstandingThe New Executive Scenario

Without market insight, companies lose timing, relevance, and margin. The modern executive needs to identify changes before they become obvious — and build practical responses, not just diagnoses.

Director, President, CEO...

In different organizations, titles vary,
but the logic is similar:

- CEO - General Management
 - CFO - Finances
 - CMO - Marketing
 - CTO - Technology
 - CPO - People
 - COO - Operations
-

Get, Grow, and Go

A simple summary of what is expected from the top:

Get - make money come in

Grow - grow with strategy

Go - operate well, with efficiency

An executive is someone who transforms ambition into a delivery system.

Show me the Money, Get the Money, and Stick the Money

First, see where the opportunities are

- Show me the Money

Then, lead the organization to them

- Get the Money

And finally, sustain performance over time, with resilience and governance

- Stick the Money

The AI Revolution and the Knowledge Economy

Artificial Intelligence is no longer a “trend” and has become part of the core of productivity. The Competitive advantage is not using AI sporadically, but integrating AI Agents, processes, and people to enhance delivery, quality, and speed.

Generative AI and agents

Generative AI and agents are becoming work infrastructure. The strategic question is: how to use them best, with governance, security, and a focus on value?

The Focus on ESG and Companies' Socio-environmental Impact

ESG in a context of real risk for the economy
Companies will be held accountable for climate adaptation, resilient supply chains, and responsible decisions — not as rhetoric, but as a condition for operational continuity.

Climate Change

Extreme weather already affects production, logistics, insurance, and costs. Those who plan for resilience and reduce supply chain vulnerabilities will win.

The new global geopolitical scenario and its impact on companies

Polarization and regulatory instability increase risk and hinder investments.

For the manager, the essential thing is to understand impacts on the sector, anticipate scenarios, and make decisions with discipline — without getting lost in political noise.

Political polarization and regulatory instability

Political polarization increases institutional instability and creates regulatory uncertainty.

In such environments, economic decisions become riskier, and companies tend to reduce long-term bets.

For the executive, the central point is to understand how this noise translates into real risk for strategy and operations

.

Clear and predictable rules for investing and growing

Businesses depend on predictability: clear rules, a stable legal environment, and coherent signals for investment.

When tariffs go up and down, conflicts intensify, and regulatory decisions change frequently, the result is paralysis.

Planning growth becomes an exercise in continuous contingency.

A photograph of a modern office interior. In the foreground, a man in a blue shirt is sitting at a dark wooden table, looking at a laptop. To his left, a woman with short blonde hair is also sitting at the table, looking towards the camera. In the background, there is a large window with a grid pattern, and a wooden bench is visible. The ceiling is made of exposed wood. The overall atmosphere is bright and professional.

Companies in a chaotic world

Organizations today operate in a more volatile environment and difficult to project.

Even when there were periods of integration and trade expansion, stability was never guaranteed — but the feeling of predictability was greater.

Now, the executive challenge is to embrace complexity and give practical answers fast.

From the integration period to tariff wars

In recent decades, global economic integration has expanded international chains, productivity, and scale.

The current scenario, on the other hand, is marked by disruptions, boycotts, protectionist movements, and tariff wars.

This raises costs, reduces efficiency, and requires more cautious and adaptive decisions.

Challenges for those starting a managerial career

Those starting a managerial career face a more intense set of challenges: accelerated technology, environmental restrictions, geopolitical instability, and global competition.

It is not necessary to master all topics as a specialist, but it is essential to understand the impacts on your sector and adjust decisions with discipline.

Making the best decisions in a turbulent world

You won't "fix" the world, but you can make better decisions within it.

Consistent updating, context reading, and execution capability differentiate managers in cycles of instability.

In turbulent scenarios, decision quality becomes a competitive advantage.

Pillar 2: Strategic Training

Strategic training is what allows the answer of the central questions of leadership: what to do now and which path to follow for growth?

It is the combination of market vision, mastery of management tools, and maturity to decide under uncertainty.

Those who develop this repertoire increase their chance of taking on greater responsibilities.

Promotions and relevant contributions

Executive careers advance through the accumulation of relevant contributions, not by chance.

Promotions tend to occur when your presence improves the team's decisions, pace, and results.

The logic is simple: consistent delivery builds trust, and trust opens space for leadership.

Why so many people aim for C-level

Higher positions combine greater impact with more expressive remuneration, and this explains the ambition for growth.

At the same time, the demands increase: dealing with risk, leading people, and sustaining results at scale.

The higher the chair, the greater the cost of a wrong decision — and the greater the value of those who decide well.

A hard truth (and the same advice)

Reaching C-level is difficult, and so is finding prepared executives.

This mismatch creates a point of attention: those who prepare methodically become a rare profile.

Therefore, the advice is direct: continuously prepare to operate in complex and competitive environments.

Behavioral skills and multicultural experience

Global companies demand productive coexistence with real differences: culture, language, values, and ways of working.

Behavioral leadership is not “soft”: it determines alignment, trust, and execution.

Adapting well and transforming diversity into better decisions is a built competence.

Digital fluency and data-driven decisions

Digital fluency is the ability to interpret numbers and use evidence to reduce guesswork.

Reading balance sheets, understanding graphs, and extracting meaning from indicators makes decisions more robust.

The executive does not need to be technical, but needs to master enough to decide based on facts.

The MBA and the management foundation

The MBA strengthens mastery of management tools and broadens strategic vision for market analysis. It organizes repertoire and improves the ability to think of alternatives, calculate risks, and guide execution.

It is a structuring foundation for decisions with greater responsibility.

English as a leadership requirement

Without English proficiency, leadership in large organizations tends to be seriously limited. The language is a tool for access: to people, projects, information, and best practices.

In global environments, it ceases to be a stand out and becomes a condition for participation.

Pillar 3: Tactical Career Planning

Once the scenario is understood and skills are developed, personal strategy comes into play: how to transform preparation into a career path.

Tactical planning means choosing priorities and building differentiators with intentionality.

A career does not evolve 'on its own': it responds to repeated decisions over time.

Competency Mapping (Skill-Based)

The first step is to realistically map your strengths and weaknesses.

Instead of trying to "be good at everything," focus on what you already do very well and strengthen that as an advantage.

In parallel, address gaps that hinder promotions and limit mobility.

International experience as a differentiator

When many professionals will have similar backgrounds, differentiators weigh more.

Well-planned international experiences broaden repertoire, strengthen language skills, and accelerate intercultural maturity.

Beyond the content, they signal readiness for more demanding contexts.

Personal brand and sponsorship

Personal brand is a reputation built on consistent delivery, demeanor, and reliability. Sponsorship emerges when leaders bet on you because they trust your value in important decisions.

Over time, reputation reduces friction in selection processes and increases invitations.

Transition to global companies

Directing one's career towards companies with global operations is a strategy consistent with where scale and opportunities lie.

Strong organizations are rarely restricted to a single country, and environments that grow above average tend to open up more possibilities.

The transition is a consequence of a well-executed plan.

Preparation for selection processes

Selection processes require a solid foundation: a well-constructed resume, a clear professional narrative, and constant investment in training.

Conversations with experienced professionals help adjust direction and development decisions.

Consistent preparation increases the quality of choices and accelerates opportunities.

The Value of Education

This phrase summarizes a practical logic: studying requires resources, but it opens doors and reduces costly mistakes.

In executive careers, repertoire and clarity of decision pay compound interest.

Pillar 4: Execution and Maintenance

Once the path opens, the challenge becomes sustenance: maintaining performance, moving to better positions, and growing consistently.

The world of work has changed, and the stability of old formats is not guaranteed.

Executive sustainability is the ability to deliver well over long cycles.

Hybrid and distributed work

Hybrid and remote work expanded possibilities and, at the same time, increased competition.

Many roles now exist with variable physical presence, including across cities and countries.

The central requirement remains: autonomy, clear communication, and consistent delivery.

Time management and productivity

The executive environment demands superior commitment, clear priorities, and discipline in execution. “Wearing the shirt” here means real responsibility for results, not excessive effort without direction.

Productivity involves scheduling, focus, and decisions that protect what is essential.

Mental health and well-being

Working until you get sick does not improve performance;

it worsens decisions and destroys consistency.

Sustainability requires physical and emotional balance to maintain clarity and energy over time.

The return of success makes sense when life accompanies the result.

Dream big and build your place in the future

Talents differ, but competencies can be developed with method.

Pursuing opportunities requires deliberate preparation and consistency: learn, apply, adjust, and advance.

Dreaming big matters — and building the path is what transforms ambition into trajectory.

Deadline, scholarships, and Q&A

We conclude with the next steps of the selection process and the scholarship calendar, followed by information about the universities.

Next, we open for questions and answers.

The proposal is to ensure total clarity on paths, criteria, and decisions for those who wish to evolve with consistency.

Programs in the United States and Europe

University of
La Verne

CSUN | CALIFORNIA
STATE UNIVERSITY
NORTHRIE

California State University Northridge, founded in 1857, is one of the largest and most important universities in the world. A reference in teaching and research in different areas of knowledge, it stands out in the training of Technology and Business professionals. The most striking characteristic of its faculty is its connection to California's economic environment, marked by ideas that are transforming labor relations.

University of La Verne

The University of La Verne - ULV is one of the most traditional and respected American universities. Founded in 1891, it is a private, non-profit institution, linked to a foundation that supports education for students from emerging countries. Located in California, 50 minutes from Los Angeles, it is in the heart of the richest American state, in the city of La Verne.

Bayswater College London, an educational institution accredited by the British Council, has campuses in central London and several other world capitals. For over 40 years, it has offered executive and language programs, providing quality education that goes beyond the classroom. Bayswater College London encourages personal and professional growth, offering a unique cultural immersion that allows students to explore the city's rich diversity.

CUOA Business School is one of Europe's most active management education centers.

Founded in 1957, it is a business school that operates with the support of the universities of Padova, Trento, Trieste, Udine, Ca' Foscari, IUAV (Venice), and Verona.

Located in Italy, it offers programs in English for students from all over Europe and the world. It is a private, non-profit foundation that supports the admission of students from emerging countries.

Benefits

- Scholarship on program value
- Support for students regarding questions about the program and enrollment process
- Free Business English module (consult courses);
- Visits to local companies
- Highly specialized professors with extensive professional experience
- Flexibility in program payment
- Preparatory readings and travel guidelines
- Guidance on visa, insurance, accommodation, and airfare
- Two short-term international certifications, during the holiday period
- Student accommodation on campus when available
- Academic Leader: support at the University during the program

The experience
abroad

Company visits

Visit Port of Los Angeles

Disney Lecture

These were some of the visits and lectures. Groups are informed about the schedule of visits and lectures in the first week of the program
