

Strategic AI

How Managers are Boosting Results with Advanced Applications of Artificial Intelligence

A conversation about career, leadership, and the future of work in the age of artificial intelligence

PROF. ALDO BRUNHARA

About the Lecturer

Prof. Aldo Brunhara

 **Doctoral degree in
International Management**

 **Director of IBS
Americas**

A wave unlike any other

Generative artificial intelligence emerged looking like just another technological fad. But in a few years, it was consolidated as a **historical milestone for humanity** — probably the most powerful tool ever created by humans.

What Makes Generative AI Unique?

Creates Other Tools

Capable of developing new solutions and accelerating technological innovation at scale

Accelerates Discoveries

Compresses decades of research into months, revolutionizing entire fields of knowledge

Improves Itself

Contributes to its own development — an unprecedented cycle of evolution in history

Transforms the World

We cannot yet fully see its ramifications — and that is what makes everything even more urgent

"The world will not be the same. Companies will not be the same. Careers will not be the same."

— Prof. Ricardo Britto

Lecture Roadmap

What we will discuss today

Five major transformations that AI is causing in the job market — and how to turn them into professional growth opportunities.

01

The End of the Professional Who Only Performs Tasks

02

The Rise of the Hybrid Team Manager

03

The Radical Increase in Individual Productivity

04

The Replacement of Positions by Competencies

05

The Convergence between AI, Automation, and Robotics

TRANSFORMATION 1 OF 5

**The end of the professional
who only performs tasks**

What is being absorbed by AI Agents?

A growing portion of operational, analytical, and administrative activities is already being performed by specialized artificial intelligence agents.

Report Generation

Managerial, executive, and performance reports automatically generated in minutes

Research and Analysis

Market research, basic financial analysis, and competitive studies

Contracts and Presentations

Drafting simple contracts and preparing corporate presentations

Customer Service

Support, demand triage, and resolution of recurring problems via digital agents

The Paradigm Shift

Before

The market rewarded **those who did the work** — effort, hours, repetitive execution, and production volume

Now

The market now rewards **those who design the work** — who supervise agents, interpret scenarios, and make decisions

 The focus shifts from raw effort and moves to **critical thinking, executive judgment, and decision-making ability.**

Commercial Management with AI Support

Imagine two managers with the same mission: **to increase revenue by 20% next year.**

Traditional Manager

- Spends weeks manually collecting data
- Builds spreadsheets and projections from scratch
- Prepares presentations and writes reports
- Delivers: **1 scenario** after much effort

Manager with AI Agents

- In one afternoon: 50 growth scenarios generated
- Competitors analyzed, prices simulated
- New segments and risks identified
- Your task: **decide where to invest R\$ 100 million**

✅ **Conclusion:** The company does not make money because someone made a spreadsheet. It makes money because someone made the right decision. **The spreadsheet became a commodity. Judgment remains rare.**

Are you using your human talent in the right activity?

Or are you wasting your capacity doing tasks that will soon be performed by machines?

TRANSFORMATION 2 OF 5

The Rise of the Hybrid Team Manager

What is a Hybrid Team?

A team formed by **people and artificial intelligence agents working together** — a reality that has already begun and that most managers have not yet realized.

10

People led today

Conventional human team of the current middle manager

5+

People in the near future

Reduced human team, more strategic and specialized

20+

AI Agents

Specialized digital agents operating simultaneously

The leader of the future will not necessarily be the one with the largest human team. It will be the one who can **multiply their capacity through artificial intelligence**.

New Competencies of the Hybrid Manager

Orchestration

Ability to coordinate people and digital agents in a single, coherent, and productive flow

Process Design

Design and continuously improve workflows that combine human and artificial intelligence

Governance

Ensure that AI agents make decisions aligned with the organization's objectives and values

Smart Delegation

Knowing what should be done by you, by another person — or by a machine

The Marketing Director: 2020 vs. 2026

Product Launch in 2020

To launch a product, the director mobilized:

- Advertising agency
- Design, digital media, and CRM teams
- Market analysts, copywriters, and SEO specialists
- 20 to 30 people on a single project

Product Launch in 2026

With 20 specialized AI agents, it has:

- Real-time competitor monitoring
- Automatic daily market analyses
- Creation and testing of hundreds of campaigns
- 24/7 reputational risk identification

✓ The director no longer spends the day **producing campaigns**. They spend the day **coordinating intelligences** — human and artificial.

TRANSFORMATION 3 OF 5

The Radical Increase in Individual Productivity

When One Professional Is Worth Many

Until recently, producing more required hiring more. Now, with the support of AI, professionals are emerging who can produce on a scale that previously depended on entire teams.

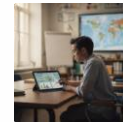

Consultant

Produces analyses that previously required several analysts working together for weeks

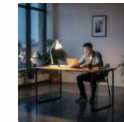

Lawyer

Reviews hundreds of documents in a few hours with accuracy and traceability

Professor

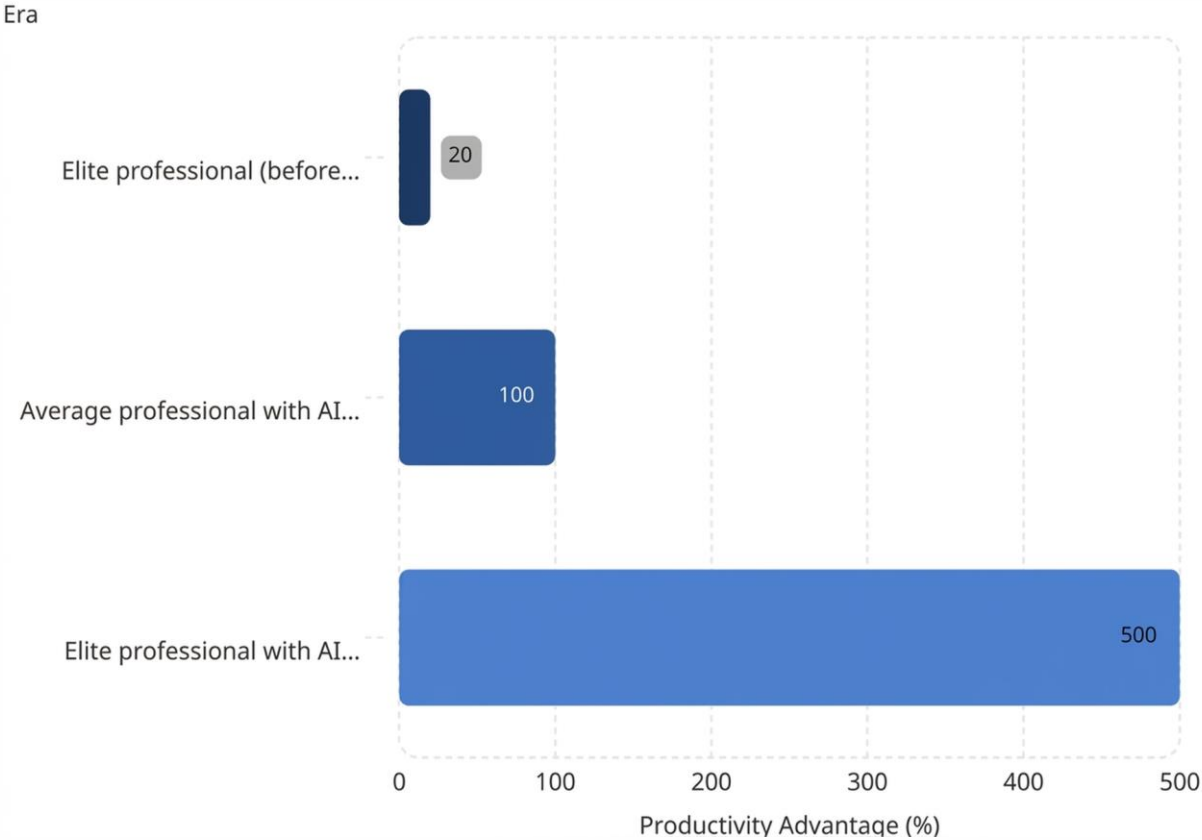

Creates personalized materials for thousands of students simultaneously

Entrepreneur

Operates a company with an extremely lean structure, without sacrificing scale

The Difference Between Professionals Is Growing

The New Standard

For decades, an excellent professional was perhaps **20% better** than average. Now we are entering a scenario where a professional can be **5 or even 10 times more productive**.

⚠ This completely changes the rules of the competitive game.

The Three Fundamental Competencies

Advanced Use of AI

Build flows and integrate agents

Curation

Filter relevant signal from noise

Continuous Learning

Stay updated with new tools weekly

These three competencies are the foundation for any professional who wishes to expand their ability to generate value in the era of artificial intelligence.

Competency 1: Advanced AI Use

It is not just about asking a few questions to ChatGPT or using two or three apps in the free version. Advanced AI use means:

→ Building Workflows

Designing automated processes that connect different tools and production stages

→ Using Specialized Agents

Configuring and supervising agents with specific roles within a larger system

→ Transforming AI into Results

Integrating tools in a way that generates concrete impact on the company's objectives

Competency 2: Continuous Learning

Every week, a new tool, a new feature, a new possibility emerges. This can seem tiring — and sometimes even chaotic. But the reality is clear:

Those Who Remain Attentive

Finds opportunities before competitors and is positioned ahead of the market

Those Who Ignore the Movement

Takes the risk of being surprised by transformations and losing professional relevance

Competence 3: Curation

The problem is no longer a **lack of information**. Now the problem is an **excess**. Every day, new news, new tools, new models, and new promises emerge.

1

Filter What is Relevant

Separate what truly generates results from what is just market noise

2

Apply with Focus

Identify which tools and trends make sense for your specific objectives

3

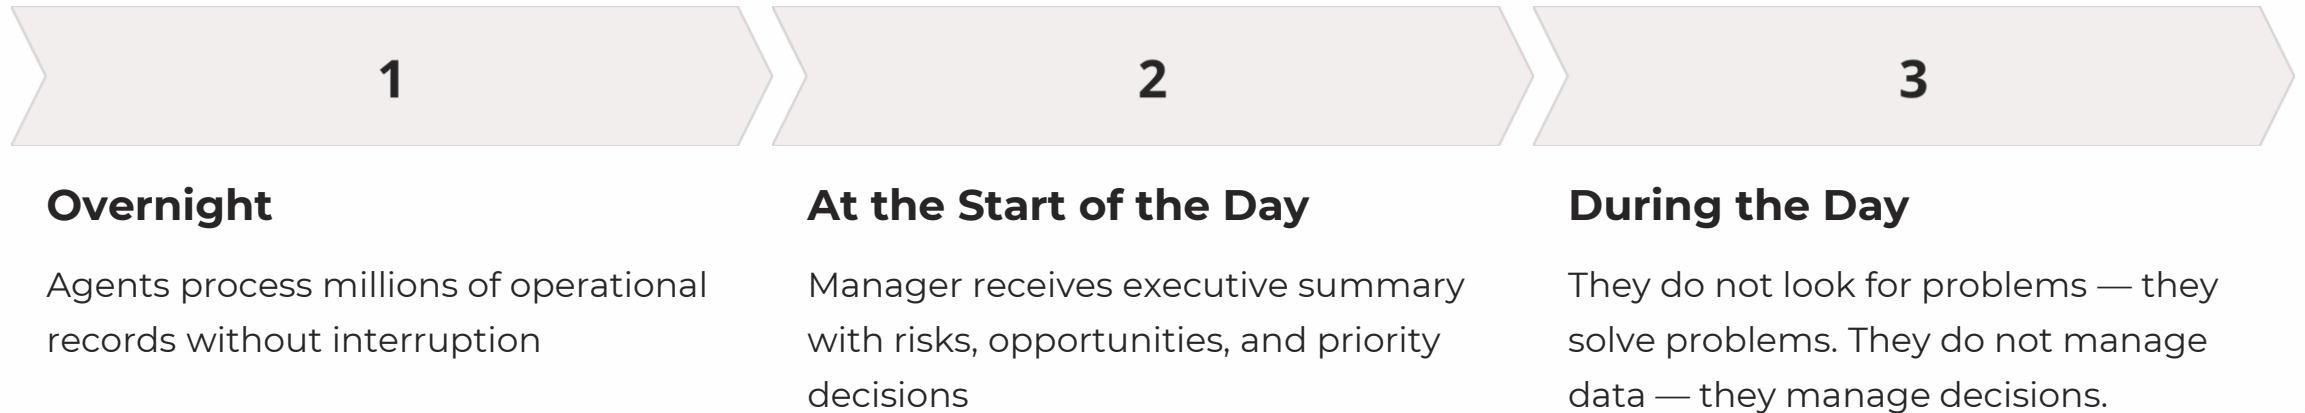

Generate Real Impact

Transform filtered knowledge into concrete action for your career and company

📌 In an environment of information overload, **knowing what to ignore is as valuable as knowing what to learn.**

The Future Director of Operations

Hundreds of employees, dozens of suppliers, thousands of orders in progress — and an agenda that was once dominated by meetings and reports. See how AI transforms this scenario:

✔ What grew was not the team. It was the **professional's managerial capacity** — amplified by technology.

Change or be left behind.

You can ignore these transformations. But they will not ignore you. The choice is yours — and it needs to be made now.

TRANSFORMATION 4 OF 5

The Replacement of Positions by Competencies

From Title to Impact

For a long time, companies organized their structures around roles — analyst, coordinator, manager, director. These roles remain important. But something is starting to change profoundly.

What the market valued

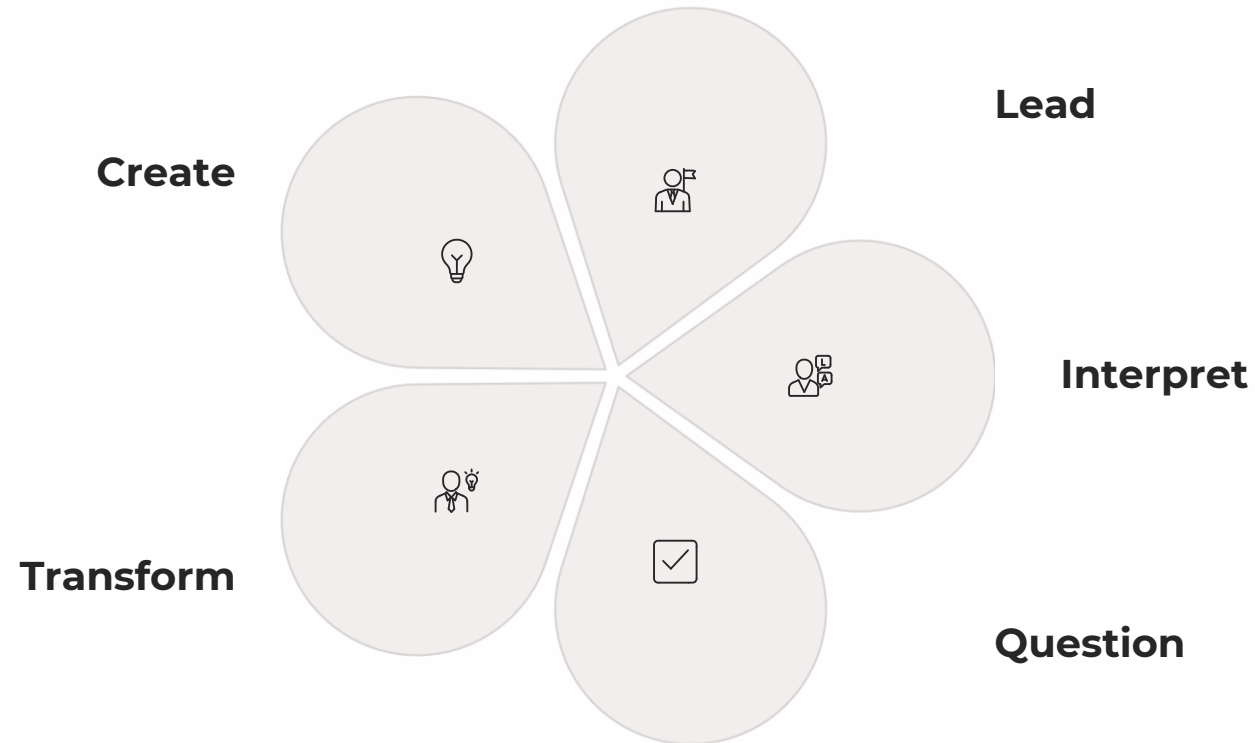

- Formal title and role
- Company tenure and seniority
- Specific technical mastery
- Efficient execution of defined tasks

What the market starts to value

- **Ability to generate results**
- Resolution of complex problems
- Influence, negotiation, and leadership
- **Transforming knowledge into impact**

What Humans Do Best

As AI agents take over part of the technical and operational activities, more space is left for what human beings do in an irreplaceable way.

Your degree and specialization will remain important. But your ability to **transform knowledge into real impact** will be even more decisive.

TRANSFORMATION 5 OF 5

The Convergence between AI, Automation, and Robotics

AI Is Coming Out of the Screens

For the first time, artificial intelligence is gaining physical presence — moving from the digital world to **perceive, interpret, and act upon the real environment.**

Eyes

Computer vision capable of identifying patterns, defects, and anomalies in real time

Ears

Sensors and data capture systems from the physical and sound environment

Hands

Precision robotics capable of performing complex physical tasks autonomously

Mobility

Autonomous vehicles and mobile robots that move and operate in the physical environment

In Previous Revolutions vs. Now

Previous Revolutions

Machines replaced **muscles**. Heavy physical labor was progressively transferred to mechanical equipment — freeing humans for cognitive functions.

This Revolution

Machines are beginning to **complement** — and in some cases **replace** — **cognitive activities**. An unprecedented disruption in human history.

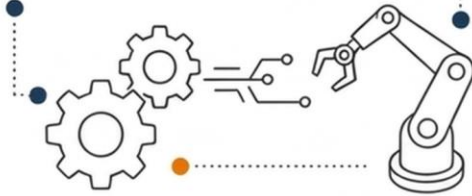

Most Impacted Sectors

The convergence of AI, automation, and robotics is redefining operating models in virtually all sectors of the economy.

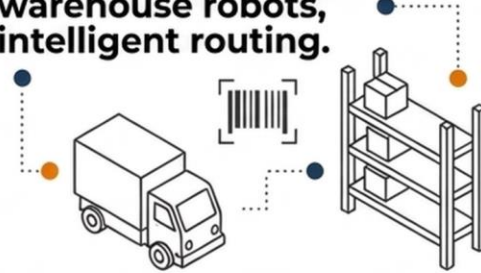

INDUSTRY

Smart factories, predictive maintenance, automated production.

LOGISTICS

Autonomous vehicles, warehouse robots, intelligent routing.

HEALTH

AI diagnostics, surgical robots, personalized medicine.

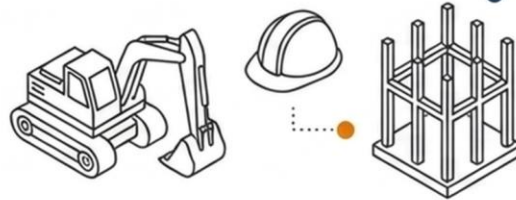

AGRICULTURE

Precision agriculture, autonomous harvesting, crop monitoring.

BUILDING

Autonomous machines, project monitoring, security systems.

SERVICES

Intelligent automation, virtual assistants, personalized service.

New Competencies for the Age of Convergence

Seeing Opportunities Earlier

Identify where the convergence of AI and robotics creates competitive advantages before competitors

Reinventing Business Models

Redesign how the company operates, delivers value and generates revenue with new technological capabilities

Leading Transformations

Drive change processes involving people, technology, and organizational culture

 **Remember:** technology, by itself, does not create competitive advantage. What creates advantage is how people use it.

Review: The 5 Great Transformations

"During the Industrial Revolution, machines amplified our physical strength. Now, for the first time in history, machines are beginning to amplify our intellectual capacity."

— Prof. Ricardo Britto

The New Winning Professional

The winners of this transformation will not necessarily be those who master technology. They will be those who learn to use it to **amplify their human potential**.

Learns Faster

Absorbs new tools, concepts, and trends with agility and discernment

Decides Better

Uses AI-generated scenarios to make more informed and secure decisions

Generates More Value

Amplifies your delivery capacity through technology — producing previously impossible results

The Real Question

Artificial intelligence will transform your career — that's already certain. The question that matters is another:

Will you lead this transformation?

Learning, adapting, expanding your repertoire and occupying prominent positions in the new scenario

Or will you chase after it?

Reacting to changes belatedly, watching other professionals and companies occupy spaces that could be yours

PROFESSIONAL DEVELOPMENT

No One Leads a Transformation with Technical Knowledge Alone

It is necessary to expand your repertoire. Expand your worldview. Live with new cultures and understand how different countries and companies are responding to these changes.

The Transformation an International Experience Provokes

Many people imagine that an international program only serves to add a line to their resume. But the true transformation is much deeper.

Expands your ability to interpret global trends

You begin to understand how major economic and technological transformations occur on a global scale

Develops new references and ways of thinking

Interacting with foreign professors and professionals from different countries permanently changes your perspective

Shapes leaders who see bigger movements

Leaders who stand out do not just observe what happens within their own company — they see global structural movements

IBS International Programs | Pecege

Through the partnership between **IBS, Pecege**, and universities in the **United States and Europe**, you have access to an experience that goes far beyond an international trip.

Accelerate Your Development

Immersion in cutting-edge content with leading international professors and executives

Expand Your Network

Relationships with professionals from different countries, cultures, and sectors

Scholarships

Discover the scholarship and program opportunities available for Pecege students

Global Vision

Develop the ability to see opportunities that professionals with a local perspective simply cannot see

An experience that changes more than your Curriculum

In many cases, an international experience does not just change your curriculum. It changes the **way you think**. The **way you work**. The **way you lead**. And, often, the **entire trajectory of your career**.

- ✔ Learn about IBS's international programs for Pecege students. Talk to the team. Evaluate which experiences make sense for your professional goals.

Our International Destinations

Choose the ideal destination for your experience

California

USA

New York

USA

Florida

USA

Italy

Europe

London

Europe

CALIFORNIA, USA

University of La Verne

One of the most traditional and respected institutions in the United States

Founded in 1891, ULV is a private, non-profit institution located 50 minutes from Los Angeles. Recognized for academic excellence and its connection with companies in the region, it combines academic rigor with a keen eye for market evolution — in a welcoming environment for students from all over the world.

Since 2003, ULV has maintained an agreement with IBS Americas, responsible for managing the selection process and the scholarship program. Short-term executive courses, taught in English, are offered and have already transformed the careers of thousands of students.

CALIFORNIA, USA

California State University, Northridge

One of the largest and most important universities in the world

A reference in teaching and research in different areas of knowledge, CSUN stands out in training Technology and Business professionals. The most striking characteristic of its faculty is its connection to California's economic environment, marked by ideas that are transforming work relationships.

CSUN leads these changes as a center for the creation and dissemination of innovative ideas, offering executive exchange programs and scholarship opportunities for qualified students.

ITALY, EUROPE

CUOA Business School

One of Europe's most active Business Administration teaching centers

Founded in 1957, CUOA Business School operates with the support of the universities of Padova, Trento, Trieste, Udine, Ca' Foscari, IUAV (Venice), and Verona. Located in Italy, it offers programs in English for students from all over Europe and the world.

It is a private, non-profit foundation that supports the entry of students from emerging countries into executive exchange programs through the offer of scholarships.

LONDON, UNITED KINGDOM

Bayswater College London

Excellence in education in the heart of London

Bayswater College London, an educational institution accredited by the British Council, has campuses in central London and several other world capitals. For over 40 years, it has offered executive and language programs, providing quality education that goes beyond the classroom.

A gateway to excellent education, the university's commitment is to provide an enriching educational experience, with a variety of courses, modern facilities, and an inspiring academic environment — encouraging personal and professional growth with a unique cultural immersion in London.

FLORIDA, USA

Florida Atlantic University

International reference in executive education

Florida Atlantic University (FAU), located north of Miami, stands out as an academic institution of excellence, recognized as one of the 'Best National Schools' by U.S. News & World Report.

FAU offers scholarships for executive exchanges in intensive three-week courses in collaboration with IBS Americas, covering areas such as Innovation and Strategic Investments. These programs attract students from various countries, enriching the educational experience with intense cultural diversity.

NEW YORK, USA

State University of New York

One of the most important Educational Systems in the United States

Founded in 1828, the State University of New York is one of the leading universities in the United States, recognized for its academic tradition and its role in innovation and professional training in different areas. The institution serves approximately 500,000 undergraduate and graduate students across 64 campuses located in different cities.

The Albany campus, where programs offered in cooperation with IBS Americas take place, provides an international environment that connects research, teaching, practice, and a global career vision.

Benefits of the International Program

Scholarship

70% scholarship on the program fee

Free Business English

Free Business English module

Specialized professors

Highly specialized professors with extensive professional experience

Travel preparation

Preparatory readings and travel guidelines

Dual certification

Two short-term international certifications, during the holiday period

Academic Leader

University support during the program

Student support

Support for questions about the program and the enrollment process

Company visits

Visits to local companies

Payment flexibility

Flexibility in program payment

Practical guidance

Guidance on visa, insurance, accommodation, and airfare

Student accommodation

On-campus student accommodation when available

SELECTION PROCESS 2027 | 2028

Your career deserves an experience recognized worldwide

An international course is not just a line on your curriculum. It is a transformation of perspective, network, and professional positioning.

  **Application Deadline**

July 30

Limited spots with scholarships. Ensure your participation.

Classes available for 2027 and 2028 - United States and Europe.

Thank you!

It was my pleasure being here with you.

Now let's move on to questions.
